

27W SOLAR ROOF VENTILATOR

PRODUCT DESCRIPTION

Features:

- 27W Monocrystalline Square solar panel, rain resistance design
- Maximum output 1600CFM (Cube Feet per Minute)
- Start voltage of only 1.5-3V, enables it to work under a wide range of solar conditions
- High quality & performance DC motor, 40cm light aluminium fan blade
- Zinc steel construction, can be powder coated in all colourbond colours
- Firm structural design and flexible bases to be fixed to any type of roof
- Thermostatically controlled and will not operate unless the temperature in the roof cavity is greater than 29 degrees Celsius (+/- 2 degrees).

Prevents units from working on cold winter mornings when you may not want the solar roof vents making your roof / home any colder than it already is.

Also extends the life span of the solar roof vents, keeping them operating when you really need them – when it's hot.
